

SWAT RF-500
Sprays Wide & Terminates Odor Vehicle

SWAT RF 500, Mobile Platform for Combating Odors, & Suppressing dust

SWAT TECHNOLOGY takes the NWC's Odor Fighting Brigadge to the location where the odors are being emitted. Like in other battle environments, there are always those that believe if you create a perimeter barrier or wall of odor control chemistry, you can prevent those bad odor molecules from passing through.

NEW WASTE CONCEPTS doesn't believe in that theory and its customers believe agree that the best defense is a good offense. Don't wait till the battle invades your neighbors property, get aggressive and go after the odors at their source before they can escape the landfill and float high into the air.

NEW WASTE CONCEPTS SWAT machine can operate for hours creating mist that can float $\frac{1}{2}$ - $\frac{3}{4}$ of a mile to impact odor molecules, that are coming from the source point where the SWAT RF machine is located.

NEW WASTE CONCEPTS SWAT machine also has the capability to apply any of the NWC Odor Brigade topically using the spray cannon. Call us for a demonstration at your site
